

CAPRICORN

December 22nd – January 19th

Element: Earth
Quality: Cardinal
Ruling Planet: Saturn
Symbol: Goat

Career-focused Capricorns have a reputation for being uptight pessimists. As a cardinal sign, Capricorns are natural born leaders and, as an earth sign, they thrive in a heavily structured environment, so it's not surprising that they value the structure and leadership that career advancement requires. Capricorns do run the risk of disregarding life's other necessities, like romantic relationships, familial relationships, and self-care, in favor of their career goals.

Though their ambitious attitudes may get in the way of their personal life, Capricorns' determination and refusal to be distracted from their goals is admirable. Ruled by taskmaster Saturn, Capricorns work hard to get to where they want to be and, once they get there, they keep on going.
