

GEMINI

May 21st – June 20th

Element: Air
Quality: Mutable
Ruling Planet: Mercury
Symbol: Twins

Symbolized by the twins, a Gemini is always juggling so many things at once that there needs to be two of them. Known as the social butterflies of the zodiac, Geminis are liked for their cleverness and wit but, because of the duality of their personality, Geminis are often seen as two-faced liars who will be your best friend one week and will have moved on to someone else the next.

Governed by Mercury, the planet of communication, Geminis can talk, talk, talk about anything. Hyperactive Geminis have short attention spans as well, so don't expect to stay on one topic for long. Though it may seem like Geminis just love the sound of their own voices, they really value social interaction and making connections with others.
