

LEO

July 23rd – August 22nd

Element: Fire
Quality: Fixed
Ruling Planet: Sun
Symbol: Lion

Represented by the lion and ruled by the sun? It's no wonder Leos are considered the divas of the zodiac. In love with the spotlight, Leos are theatrical socialites and natural leaders. Absolutely fearless and an endless source of positivity and light, Leos don't need to bring others down to lift themselves up.

The sun never goes retrograde and, similarly, Leos are known for their stability. Leo governs the heart and so they've got a lot of love to give. At times, a Leo might feel threatened if someone else's light is shining a little brighter than theirs, but then they remember that they're Leos and they're fabulous and then they get back on the dance floor to show the world.
